

Beef cattle are raised in all 159 counties in Georgia! Did you know that 99% of a cow will be used for meat and by-products? Their intestines provide us with tennis racket and instrument strings. Their fats and fatty acids can be found in makeup, pet foods, crayons, paint and soap. The gelatin from their bones can be found in glue, the adhesive on bandages, jello, marshmallows and gummy candies. Their hide can be turned into luggage, clothing, gloves and balls.
