

Soybeans are amazing plants! They've been growing in Georgia since 1765. Each plant grows pods with tiny beans inside—usually 60 to 80 pods per plant! Soybeans can be used to make all kinds of things like food (tofu, soy milk, and soy sauce), animal feed, cooking oil, crayons, candles, ink, fuel, and even some types of plastic and makeup. One acre of soybeans can make over 82,000 crayons!
